

Electric Utility Update - Power Content Label, RPS Program, and Recent Activities

Power Content Label and Power Source Disclosure Report

Bill insert slated to be delivered to all utility customers in January 2026.

Total	100%	100%
Retail sales covered by retired unbundled RECs	1%	
<ul style="list-style-type: none"> This label does not reflect compliance with the Renewables Portfolio Standard (RPS), which measures the use of tracking instruments called Renewable Energy Credits (RECs) over the course of multi-year compliance periods. RECs that are purchased separately from the renewable energy ("Unbundled RECs") can be used for RPS compliance, but they do not factor into the power mixes or GHG emissions intensities above. GHG intensity figures exclude biogenic CO₂ and emissions from geothermal sources and grandfathered imports of firmed-and-shaped energy. For detailed information about all GHG emissions from California's retail electricity suppliers, visit the CEC webpage at the link below. Unspecified power is electricity purchased from a genericized pool on the open market.
